

PARETO TALENT · BOOTCAMP 7 · BEGINNER EDITION

From Zero to Hired.

Ten days at two hours a day. One new profession.

Live Sep 21 to Oct 2 2026, 2 to 4 PM CST. Instructor Ivan Bunin.

A day by day book for total beginners. No experience needed.

Kasim Aslam: Find the right people. Give them ownership. Get out of the way.

5,638 applied	855 in the room	118 hired last cohort	93% stay a full year
-------------------------	---------------------------	---------------------------------	--------------------------------

By Demian Ducardt · Beginner edition, Oct 2026 · <https://paretotalent.com>

Day 1. Welcome to the job.

Orientation with Ivan Bunin plus the Pareto team. No experience needed.

Picture a hiring problem. A founder drowns in inbox plus calendar plus follow ups. A talented assistant wants real responsibility. Pareto Talent sits between them. It finds people, trains them for ten days, and places the best with founders as Right Hands.

The story starts in 2018. Kasim Aslam hired Ivan Bunin from a freelance site for 1,200 USD. Ivan grew from assistant to Tech Lead to CTO by 2022. Their agency Solutions 8 later sold for eight figures. Having lived both sides of hiring, the two founders started Pareto Talent. The first class graduated in April 2024.

Scale around it: more than 3,000 graduates across 6 bootcamps with more than 35,000 applicants all time. Of those, 350 were accepted to Pareto Talent. Money behind it: 1.2M USD paid in salary with 4.9 of 5 across 84 Google reviews. Model from Day 1 slide 20: We find talent and train them, then place them with entrepreneurs.

A Right Hand owns outcomes. An assistant completes tasks. The difference shows in a hard week: the Right Hand triages the inbox, guards calendar blocks, chases vendors, updates the CRM, writes meeting recaps, filters hiring mail, repurposes content, and ships a Friday report. Each task closes its own loop.

Kasim Aslam: Find the right people. Give them ownership. Get out of the way.

House rules. Six, word for word from slide 34.

- 01 Be professional. Treat like workplace training. Every message is a writing sample.
- 02 Stay on topic. Keep threads readable. Open a new thread instead of derailing.
- 03 Be polite. Rude or inappropriate behavior gets penalized, with no warning.
- 04 Ask smart questions. Check pinned FAQ and recordings first, then ask with specifics.
- 05 English only. Every message plus every class across all ten days. Required from day one.
- 06 No spam. No promotions plus no off topic links. Protect attention.

Meaning behind the rules, extracted from Ivan live talk. Work unites strangers, so hijacked threads get cut fast. Rudeness includes a passive aggressive tone and brings immediate removal. Searching before asking respects the answerer, who would otherwise search for you. English runs C1 plus C2 plus native in the room, and client work runs in English, so ten days of typing plus speaking plus live conversation build fluency. Outside chat groups sit beyond protection, with no guarantees. Gentle memes survive. Confusing ones get deleted.

EOD report template
Done: [one line per finished item]
In Progress: [one line per open item]
Blockers: [what stops you, plus what you need]

Four Cs template
Clear: [single point plus names plus dates]
Complete: [context plus link plus next step]
Concise: [short lines, no padding]
Call to Action: [the one ask]

10,381

118
hired

Day 2. How to talk to AI.

Craft day. Ivan: yesterday was the job, today is the craft.

Think of AI as a phone. Nobody studies chips and wiring. Everybody cares that taps respond. Ivan compresses thousands of practice hours into this class. Students dive in like Alice. The ones who use AI as professionals pull ahead, because companies are only starting to adopt it.

Context beats clever wording. Weak material in gives weak answers out. The class demo with random numbers proves models predict rather than calculate. So every task follows four moves:

- Gather: pull raw material from the six daily sources.
- Clean: keep first person lines plus numbers plus dates, drop filler.
- Load: place files in the Project with instructions plus knowledge plus examples.
- Ask: prompt against loaded context with a narrow job plus output shape.

Six daily sources named in class: YouTube plus Drive plus scraping plus Fathom plus dictation plus chat history. Slow typists gain the most here. Below 140 words per minute, install dictation. The fastest first bootcamp entry hit 90. The internal team runs Whisper Flow with 22 months Pro plus one free extra month. No page, video, or podcast stays unusable. Dictate its context instead.

The interview trick replaces blank page writing. Prompt the model to interview you with 20 questions, one by one, capped at 20, to build the thing. Ivan used it for a Facebook campaign plus a one pager partner doc plus a ClickUp SOP creator plus a free training offer for Argentina Right Hands. Answers pile into context. The final answer becomes the brief. Export whole threads, never single emails, and save as Markdown for reuse.

Zero shot template

Task: [one job]

Context: [paste the 3 best facts]

Format: [bullets plus headings]

Constraints: [length plus tone plus banned words]

Now produce the draft.

Style guide paste

Follow these rules every time: 8th grade reading,
short sentences, Markdown bullets, no intro paragraph.

Named frameworks share one spine. CO-STAR plus CRAFT plus RTF plus APE split prompts into role plus context plus constraints plus output. Pick one per team and reuse it everywhere. Four techniques cover daily work. Zero shot handles straight tasks with task plus context plus format plus constraints. Examples lock tone when format must hold across runs. Chain of thought suits multi constraint analysis with visible steps you can audit. Role prompts prep meetings from the executive and engineering angles.

Research supplement, labeled: prompt guides converge with class. PromptEngineering.guide teaches hyper clarity plus one major task at a time plus context hygiene plus a pasted style guide banning filler words. Its brain dump asks the model to map the topic first, then place your problem inside that map. Few shot prompting locks format with 2 to 3 examples, while role playing shifts vocabulary, such as Act as a Senior Network Engineer. Red teaming inverts the job: explain how to guarantee this project fails, then avoid each step. Karo Zieminski states context engineering replaces prompting as the core builder skill, with four canonical moves: Write, Select, Compress, Isolate. Tobi Lutke plus Andrej Karpathy frame it as loading exactly the right data into working memory. Too little context brings guessing. Too much irrelevant context brings confusion.

Gather

Ask

narrow job

Day 3. Your second brain.

Storage day. Day 2 taught extraction. Day 3 adds memory plus agency.

Tuesday morning. A founder asks for the Q3 hiring rubric. You answer in four minutes. Nothing lived in your head. Everything lived in the folder. That is the whole pitch.

The idea predates the web. Niklas Luhmann wrote 90,000 paper slips across his career. A €5 million project spent 15 years digitizing them. A volunteer map later charted 73,715 cards as one network. Tiago Forte turned that lineage into PARA: Projects plus Areas plus Resources plus Archives. Four folders hold a life. Forte now teaches an AI Second Brain program built on the same four.

- Context layer: Drive folders with stable names plus plain language docs plus MOC index.
- Action layer: live connectors such as Gmail plus Drive scheduling plus sending.

PARA in practice, with real examples from the Forte Labs team. Projects carry deadlines: plan trip to the Netherlands plus hire a Social Media Writer plus update company website plus film a TV show pilot. Areas carry standards with no end date: apartment plus taxes. Resources carry fuel: email marketing plus mental models. Archives carry the closed past: former clients plus fellowship applications. A founder brain maps onto this shape: offer plus proof plus voice plus transcripts.

Atomicity decides note size. One idea per note, capped near 500 words. A single sentence counts. Each note carries a unique timestamp ID such as 202001151848, plus a header with tags, plus a body in your own words, plus backlinks to neighbors. Workflow runs four folders: capture fast in Fleeting, summarize sources in Literature, distill single ideas in Permanent, weave them on Index notes. Folders track process, with no sorting by topic inside them.

MOCs are the surfboards. MOC expands to Map of Content. A hub note titled Philosophy Overview links Ethics plus Metaphysics plus Existentialism plus Logic. Each child links deeper notes. The hub updates as the web grows. It never pretends to be final. Digital vaults cannot stack similar cards side by side, so the MOC restores that adjacency.

```
Frontmatter block, copy it
---
title: Pareto Offer
tags: [offer, pricing]
source: https://paretotalent.com
updated: 2026-10-06
---
```

```
MOC sample, copy the shape
# Offer MOC
- [[Pricing]] - annual plus quarterly plus monthly
- [[Guarantees]] - Freedom 40 plus Matching plus Lifetime
- [[Proof wall]] - numbers plus client lines
```

```
Folder tree, copy it
/01_Identity/own voice plus story
/02_Offer/pricing plus guarantees
/04_Positioning/voice plus proof
/05_Transcripts/source episodes
/06_Tools/connectors plus routines
```

Files live in Drive, with Obsidian as window only. Claude Code handles full folder work better than chat. Discovery runs on frontmatter plus wiki links plus MOC. MOC reads as README plus agenda for the model.

Routine makes it alive. Daily extract writes decisions plus open loops plus numbers plus owners. Morning brief reads calendar plus inbox plus project states plus blockers. Retrieval test closes the build: three questions the brain must answer from files alone. Breaks Ivan names: stale docs plus missing links plus absent MOC plus untested retrieval. Access grows in stages, with money plus secrets plus client data plus keys fenced.

Research supplement, labeled: retrieval science behind the brain. Production AI pairs a retriever with a generator, with fusion logic between them. Documents split into chunks, each chunk embedded as a vector, queries matched by similarity, top matches fused into the answer. Chunking styles tested in papers: fixed length plus semantic plus content based plus adaptive. Finding with practical bite: metadata as text, such as prefixing title plus owner plus date plus type, lifts retrieval accuracy, though index rebuilds cost compute. Student translation: file names plus titles plus tags plus frontmatter decide what Claude finds. Messy names bury good notes.

Research supplement, labeled: connectors behind the action layer. MCP docs compare the standard to a USB-C port for AI applications. Servers expose actions the model can call plus data it can read. Gmail ships a remote MCP server with search plus thread retrieval on the read side and drafts plus labels on the write side, all under the user own permissions. Notion connects with one command: `claude mcp add --transport http notion https://mcp.notion.com/mcp`. Claude connectors for Gmail stay read only and answer with citations linking each message. Rule for students: grant the narrowest scope that completes the task, and keep human checkpoints on client and money steps.

CONTEXT LAYER

Drive folders, docs, MOC
stable names, plain words

ACTION LAYER

Gmail, Calendar, routines
reads and sends live

Day 4. Skills that do work.

Hands day. Modified class, built live with students. Public courses lag behind it.

Context without hands only answers questions. Day 4 adds doing. A Skill is one capability in one file. Write it narrowly and it fires reliably. Write it vaguely and it sprawls. Ivan built this class fast alongside students because older automation courses already teach expired paths.

- Name plus routing description: when the skill fires.
- Scoped tools: narrow permissions for Drive plus Gmail plus Slack plus Notion.
- Plain steps: short ordered actions with inputs plus outputs.
- Quality bar: done criteria plus human checkpoint on client and money steps.

Fire by slash command or by topic intent. MCP connects the model to Calendar plus CRM plus docs. Shapes: subagent for single track work, team for parallel tracks, workflow for fixed chains. Zapier and n8n sit where scheduled multi app chains beat chat. Throughline demo is a LinkedIn engine from scraped posts plus YouTube best practices plus Kasim voice plus Canva templates plus GoHighLevel scheduling, firing as a Routine at 9 AM Chicago. Class build: one real Skill plus one real connector, tested twice, shared as zip with Loom. Warning repeated: scheduled posts notify for check, faults stay yours, never blame the model.

```
SKILL.md skeleton, copy it
---
name: linkedin-draft
routing: fires on "draft LinkedIn post"
tools: [drive-read, canva-read]
---
Steps:
1. Load voice plus frameworks.
2. Draft 150 words with hook first.
3. Return draft plus image prompt.
Quality bar: on voice, one CTA, no banned words.
```

```
Notion MCP connect, copy it
claude mcp add --transport http notion https://mcp.notion.com/mcp
# then run /mcp and complete OAuth
```

Concrete MCP paths from vendor docs. Notion connects with the command above, then OAuth. Gmail offers a remote MCP server with search plus thread retrieval on the read side and drafts plus labels on the write side. Claude Gmail connectors stay read only with cited answers. Start from the modelcontextprotocol.io docs for transports plus auth.

Write skill
one file

Fire it
slash, intent

Connect
MCP tools

Schedule
routine

Day 5. Offers before pixels.

Public page day. A landing page is an offer. Friday session ran 2 hours 11 minutes.

Day 5 turns the week into a URL. Context plus Second Brain plus Skills plus Routines become something to point at. Ivan states the order in the first 90 seconds. Students already hold almost everything for a full website with AI. A Brain speaking as Kasim Aslam changes output quality immediately.

Offer comes before pixels. Logic follows Alex Hormozi Grand Slam Offer: dream outcome plus likelihood plus speed plus ease with risk removed by guarantee. Never write cold. Slide instruction: ask Claude to interview you for each card with 20 questions for a perfect offer.

Five cards. Slide text with warnings.

- 01 Audience. Who this is actually for, specifically. Name the exact person. Business stage. Role. What a normal week actually looks like for them. Slide warns against everyone who wants to grow.
- 02 Problem. The one pain they would genuinely pay to make go away. Single pain keeping them up at night right now, in their own words. Slide warns against a list of five problems.
- 03 Solution. What you are actually offering to fix it. The real outcome they walk away with once it is working. Slide warns against tool or feature talk.
- 04 Bonuses. What sweetens the deal beyond the core solution. Real value that knocks out their next objection. Slide warns against random extras bolted on to pad the offer.
- 05 Guarantee. What removes the risk from their side, with no shift to yours. If it does not work, say plainly what happens to their money or their time.

Idea extracted from Ivan talk: most entrepreneurs start and end with solution. Example given in class: I will do websites, with no stated for whom, no pain, no outcome. That is why offers fail. As a Right Hand, packaging offers into websites and funnels is core work. Ivan repeated the thesis twice: every section exists to fight one objection, offer first, page second. Worked example with course numbers: dream outcome reads 12.5 hours back weekly. Likelihood rides on 100 plus founders plus 93 percent retention. Delay shrinks to a 2 minute quiz with 3 matches in 24 hours. Effort drops to reply by email.

Inverse interview prompt, copy it
Ask me 20 questions you need to build me a perfect
offer. One by one. Cover audience, problem, solution,
bonuses, guarantee. Then draft the offer in 150 words.

Landing sections, build in this order
hero / social proof / problem / how it works /
benefits / offer / guarantees / final CTA

Research supplement, labeled: standard Hormozi background. Value equation plus value stacking plus scarcity plus urgency plus guarantees plus naming. Book \$100M Offers, published 2021 by Acquisition.com. Grand Slam Offer centers high dream outcome plus high perceived likelihood plus low time delay plus low effort, with bonuses and risk reversal. Ivan five cards map to that book chapters on problems, solutions, trim and stack, scarcity, urgency, bonuses, guarantees, naming. Equation form from the Hormozi wiki: Value equals Dream Outcome times Perceived Likelihood, divided by Time Delay times Effort and Sacrifice. Numerator rises with a named outcome plus proof. Denominator falls with fast delivery plus done for you steps. Blinkist

summary frames the same bet: disproportionate value unlocks big ticket pricing. Label ends here.
Slide content above is source truth.

Kasim Aslam headline, verbatim from <https://paretotalent.com>: You don't have a people problem. You have a delegation problem.

Day 6. The chain after the click.

Execution day. Recording about 1 hour 57 minutes. Thesis: everything after the click runs the business.

Friday built offer and design. Day 6 connects Traffic plus Landing page plus Form plus CRM plus Pipeline plus Automation plus Payment plus Nurture plus Remarketing. A page is one box in a longer chain, and the chain is what earns.

Hero carries the business. Ivan cites 58 percent never scroll past hero. Pareto Talent example shows 93 percent see hero with about 50 percent reaching reasons. One second scan decides stay or leave. Class reviews grade clarity plus contrast plus single CTA plus rich proof.

- Trigger: form submit starts the chain.
- Condition: revenue band plus need route the fork.
- Action: tag plus opportunity plus stage plus notify plus deliver.
- Delay: wait between sequenced emails.

Pipeline moves lead to booked to showed to money, with a stage for unqualified. Form Builder feeds tags plus opportunities. Day 6 bar: one qualifier form embedded in the Friday page plus one automation with correct stage plus internal notification plus at least two sequenced emails. Optional stretch tags openers and clickers as Engaged Lead. Payments run through Stripe with integrations noted. Nurture plus remarketing close the loop.

```
Automation recipe, copy it
Trigger: form_submit
Condition: revenue == high AND need == now
Action: tag(qualified) + opportunity.create + notify(self)
Delay: wait 2 days
Action: send(email_2)
```

Qualifier form fields, copy them
first name / last name / work email / company URL /
revenue band / AI use / need

Research supplement, labeled: Clarity is free forever with no traffic limits, live on 2M plus sites and apps, GDPR plus CCPA ready. Core objects: session recordings with Highlights plus click plus scroll plus drop heatmaps plus AI summaries of behavior trends plus AI chat over the data. Setup is low code with minimal bandwidth impact. Mobile SDK covers Android plus iOS plus Flutter plus React Native. A Model Context Protocol server plus a browser extension bring analytics into the AI tool and onto the page. Use it exactly as Ivan demoed: open the scroll map, find the drop, fix the hero first.

Day 7. Images and video that sell.

Creative day with Amparo Linares and Candela Copello. 19 pages. Three live demos.

Today builds raw creative assets. Tomorrow distributes them. Rule for the day: iterate, with no regenerate loop. First image is a draft. Think architect and builder. Ivan directs, the model builds. Day 5 vibe coding uses the same split. Every asset serves a section, an ad, or a page. Random funny outputs do not count.

- Prompting for on brand images with iteration discipline.
- Same toolkit aimed at ads, with changed hooks plus proof plus CTA.
- Text to video plus voice cloning for narration.
- Candela toolkit for cutting plus animating plus finishing clips.
- Three live demos: image plus video plus real edit.

Idea extracted from the money talk: Amparo runs Pareto ads daily and shows the batch system. Real spend backs the method: about 10,000 USD across campaigns for one ad family, about 1,000 USD in Higgsfield credits for the Nuno video batch. Registrations for VibeCode Incubator workshops followed. Candela edits full time and shows OpusClip plus OpenArt plus Claude Design plus Claude Code passes on real Kasim footage. Premiere and After Effects remain her base, with AI wrapped around that base.

```
Image prompt template, copy it
Subject: [founder at desk, morning light]
Palette: [Pareto dark plus blue]
Style: [real photo, calm, sharp]
Use: [hero section, 16:9]
Iterate: [one variable per pass]
```

```
Edit checklist, copy it
remove silences / add B-roll / add music /
export captions / export thumbnail
```

Iteration loop taught in class: generate once, critique against palette plus subject, adjust one variable, repeat. Never hit regenerate on a weak draft. Isolate the fault in a fresh pass and fix that sub problem alone. Ship target: 2 to 3 on brand ad images plus AI B-roll plus one finished edited video with captions and music, with prompts included.

Generate
draft one

Critique
vs brand

Adjust one
single variable

Repeat
until match

Day 8. Traffic and ads.

Distribution day. 28 pages. Offer plus no traffic equals invisible.

Day 8 connects offer plus Second Brain plus landing plus forms plus automations plus AI content to attention. Remaining puzzle: someone must reach the page, submit the form, move forward. Traffic plus funnels plus conversion logic opens. Personal brand follows as moat with voice plus references plus scripting. Audience definition follows with ICP plus personas plus pains plus angles. Scoring follows with Idea Test plus Pareto Score. Meta and Google ads close with numbers.

- Five personas by cause with pains in founder words.
- Two angles per persona plus three combos mapped to funnel stages.
- Full hook plus body plus CTA creatives with visual direction.
- Five rival teardowns with format plus promise plus capture.

Idea extracted from the ads talk: broad settings with standard defaults win now. Old precise radius plus interest stacking stopped working. Follow a current YouTube click path for dashboard clicks, since Ivan does not teach full dashboard button by button. Cost math stays

explicit: Ivan derives 150 USD per graduate through the full process in class. Decent traffic plus great offer compounds through sharing. Weak offer plus heavy traffic burns cash. Example persona from class logic: Ops Drowner. Owner led with inbox owning mornings plus calendar running the founder. Client words: my calendar runs me.

Persona template, copy it
Name: [Ops Drowner]
Stage: [owner led, 300k plus]
Pain: [inbox owns mornings]
Words: ["my calendar runs me"]
Angle: [reclaim 12.5 hours weekly]

Ad template, copy it
Hook: [one line pain]
Body: [offer plus qualifier plus proof]
CTA: [get my score]
Visual: [founder desk, dark blue]

Personas
5 by cause

Angles
2 each

Creatives
hook body CTA

Teardowns
5 rivals

Day 9. Inbox, calendar, projects.

Operator day. 25 pages with 4,166 transcript lines. Classic executive core.

Day 9 compresses classic executive work. Inbox for self and founder. Calendar for a packed founder. Projects spanning weeks. Reflection plus SOPs so nothing gets solved twice.

- Inbox Zero: closed loops with Claude plus Shortwave plus real features.
- Calendar: strategies plus time zones plus rookie mistakes.
- Project management: Problem, Plan, Progress, Present.
- Closing the loop: reflection plus SOPs.
- Bonus: business mapping before running the business.

Inbox Zero means mental weight near zero, with no claim of zero emails. Gmail wins through open API. Shortwave demo shows to dos plus bundles plus AI sort plus context replies with calendar in inbox plus search. Shortwave stands as best tested after Superhuman plus others,

and serves as Pareto internal standard. Cutoff date strategy rescues 10,000 email inboxes. Rule book per founder defines tone plus speed plus escalation. Access runs Stages 1 to 3 through delegated access or password access. Secrets live in Bitwarden with Apple Keychain as backup.

```
SOP skeleton, copy it
Purpose: [what this achieves, why it exists]
Steps:
1. [action plus owner plus deadline]
2. [action plus owner plus deadline]
QA: [check that proves done]
```

```
Inbox rule template, copy it
Triage twice daily: [08:00, 16:00]
Reply window: [under 4 hours]
Escalate: [money plus client plus hiring]
```

Calendar uses Tetris stacking with buffers plus clear titles plus links plus agendas. Projects carry owners plus deadlines plus resources plus updates plus a clean present step. SOPs exist so the same problem never returns. Ivan learned attendance links plus default mute the hard way in cohort one, then wrote the SOP so the failure never repeats.

Day 10. Pareto and the final build.

Placement day. 51 pages with 5,594 transcript lines. Kasim guest plus long Q and A.

Day 10 ties nine days together. Business mapping bonus opens: draw left to right from traffic to invoice. Every box links to a real asset. Red marks gaps, green marks built. Values run under GROWTH with three expectations and four dealbreakers. Perks: community plus trainings plus coaching plus tools plus equipment plus lifetime replacement plus salary floor plus PTO plus USD pay plus no tracking. Path after bootcamp: final project review, interview with the CSM team, onboarding handbook, stay active.

- Strategy: Second Brain plus 3 teardowns plus ICP plus personas plus qualifier math.
- Plan: business map plus ClickUp board plus SOP.
- Magnet plus funnel: quiz plus landing plus form plus forked thank you pages.

- Delivery plus proof: pipeline plus workflows plus 5 ads plus Loom plus PDF.

Idea extracted from the closing stories: one student submitted Saturday morning, interviewed Monday, and joined Architects the same week. Source Day 10 transcript lines 2581 to 2589.

Bonus in class: Ivan offers 300 USD to buy a magnet beating his cost per lead. Final logistics: deadline EOD Oct 7 Uruguay Time GMT-3. Results plus certification by Oct 16. Rule: test every link incognito, with no login wall and no shortened links.

PDF sections, copy the order

1. Name plus application email plus magnet title plus tool
2. Link index L1 to L20, full https or dash
3. Walkthrough: research plus map plus plan plus offer

Loom timing, copy it

0-20 magnet / 20-50 landing / 50-80 quiz fork /
80-110 delivery / 110-120 ads plus contact

Map
left to right

Build
